EDUCATION

- National Institute of Technology Mizoram** Aizawl, India
Bachelor of Technology in Computer Science & Engineering; CGPA: 9.36/10 Aug. 2023 – Present
- Sainik School Kalikiri** Andhra Pradesh, India
All India Senior School Certificate Examination (Class XII) – 90.4% — Class X – 92.8% 2015 – 2022

EXPERIENCE

- Vyorius Drones Pvt. Ltd.** Remote
React Intern – Testing and Automation May 2025 – Aug. 2025
 - Frontend Performance Engineering:** Optimized multi-drone telemetry dashboards, minimizing render overhead and restructuring application state handling for high-frequency WebSockets.
 - Automation & Reliability:** Engineered automated E2E testing pipelines to secure deployment release gates, successfully reducing regression vulnerabilities.
- Trivon Ventures** Remote
Software Development Intern Mar. 2025 – Apr. 2025
 - Backend Automation:** Engineered a multi-user Node.js WhatsApp chatbot to stream context-aware prompt processing pipelines with request throttling.
 - System Architecture:** Handled full-stack API integration, database schema normalization, and query tuning to minimize client request latencies.

PROJECTS

- SmartPad – Offline AI Next-Word Prediction Text Editor (C++, Qt 6, ONNX):**
 - Engineered a lightweight C++ desktop editor running private, zero-latency text predictions entirely offline.
 - Embedded ONNX Runtime on a background thread to map input tokens, attention masks, and positional graphs.
 - Built real-time user behavior learning utilizing an SQLite3 database schema overlaying custom log-scale probabilistic frequency biases.
 - Programmed automatic context parsing to instantly switch prediction models between Blog writing and Coding modes.
- Live Bus Tracking Application (React Native, Node.js, PostgreSQL):**
 - Developed a cross-platform mobile vehicle tracking ecosystem for the campus transit network with a low streaming lag of 2–5 seconds.
 - Built client-side GPS location polling mechanisms and custom interactive map routing overlays.
 - Configured identity verification via Clerk Authentication alongside multi-module role-based access tokens.
- BlueCode – Online Code Editor (React, Node.js, Python):**
 - Created an online multi-language IDE incorporating isolated code execution sandboxes with instantaneous output stream rendering.
 - Integrated cloud file persistence layers and voice-command tracking using cloud speech-to-text API graphs.
- Food Delivery Website (MERN Stack):**
 - Fabricated an e-commerce food portal featuring restaurant dashboards, live order tracking, and secure payment systems.
 - Integrated Google Directions API matrices to calculate travel paths and dispatch route optimizations.

TECHNICAL SKILLS

- Languages:** C++, Python, JavaScript (ES6+), SQL, C
- Frameworks & Web:** ReactJS, React Native, Node.js, Express.js, Bootstrap, RESTful APIs
- Databases & Tools:** MongoDB, PostgreSQL, SQLite3, GCP, Docker, Qt Creator, Git, Inno Setup
- Machine Learning:** ONNX Runtime, Transformers (Hugging Face), PyTorch, TensorFlow, Scikit-learn, Pandas
- Core Concepts:** Data Structures & Algorithms (DSA), OOP, Database Design, Computer Networks, SDLC

ACHIEVEMENTS & ACTIVITIES

- Smart India Hackathon:** Selected to represent NIT Mizoram as a national-level institute finalist.
- Yuvamanthan Hackathon:** Grand Prize Winner – developed a digital mapping architecture layout for optimized climate and disaster management.
